

LISTING OF THE CLAIMS:

1. (Currently Amended): A method of managing copies of virtual volume data, comprising:

receiving an access request directed to an original virtual volume, wherein the original virtual volume is associated with one or more original physical volumes contained on a first type of data storage media;

mapping the access request to a secondary virtual volume; and

performing the access request on one or more physical volumes associated with the secondary virtual volume contained on a second type of data storage media.

2. (Canceled)

3. (Original): The method of claim 1, wherein the original virtual volume is associated with one or more original physical volumes, and wherein the one or more original physical volumes are the same as the one or more physical volumes.

4. (Canceled)

5. (Currently Amended): The method of claim [[4]] 1, wherein the first type of data storage media and the second type of data storage media is one of magnetic tape media, magnetic disk media, optical media, floppy diskettes, CD-ROM media, DVD-ROM media, random access memory (RAM), and memory card media.

6. (Original): The method of claim 1, wherein mapping the access request to a secondary virtual volume includes redirecting the access request from a first secondary virtual volume to a second secondary virtual volume.

7. (Original): The method of claim 6, wherein the access request is redirected in response to a fault in a physical volume of the first secondary virtual volume.

8. (Original): The method of claim 6, wherein the access request is redirected in response to a command to redirect the access request to the second secondary virtual volume.
9. (Original): The method of claim 6, wherein the first secondary virtual volume includes physical volumes on a first media type and the second secondary virtual volume includes physical volumes on a second media type.
10. (Original): The method of claim 9, wherein performing the access request on one or more physical volumes associated with the secondary virtual volume includes converting the access request to a format suitable for the second media type.
11. (Original): The method of claim 1, wherein the access request is received using a first communication protocol and wherein performing the access request on one or more physical volumes associated with the secondary virtual volume includes converting the access request from the first communication protocol to a second communication protocol.
12. (Currently Amended): An apparatus for managing copies of virtual volume data, comprising:
means for receiving an access request directed to an original virtual volume,
wherein the original virtual volume is associated with one or more original physical volumes contained on a first type of data storage media;
means for mapping the access request to a secondary virtual volume; and
means for performing the access request on one or more physical volumes associated with the secondary virtual volume contained on a second type of data storage media.
13. (Canceled)

14. (Original): The apparatus of claim 12, wherein the original virtual volume is associated with one or more original physical volumes, and wherein the one or more original physical volumes are the same as the one or more physical volumes.

15. (Canceled)

16. (Currently Amended): The apparatus of claim ~~[[15]]~~ 12, wherein the first type of data storage media and the second type of data storage media is one of magnetic tape media, magnetic disk media, optical media, floppy diskettes, CD-ROM media, DVD-ROM media, random access memory (RAM), and memory card media.

17. (Original): The apparatus of claim 12, wherein the means for mapping the access request to a secondary virtual volume includes means for redirecting the access request from a first secondary virtual volume to a second secondary virtual volume.

18. (Original): The apparatus of claim 17, wherein the access request is redirected in response to a fault in a physical volume of the first secondary virtual volume.

19. (Original): The apparatus of claim 17, wherein the access request is redirected in response to a command to redirect the access request to the second secondary virtual volume.

20. (Original): The apparatus of claim 17, wherein the first secondary virtual volume includes physical volumes on a first media type and the second secondary virtual volume includes physical volumes on a second media type.

21. (Original): The apparatus of claim 20, wherein the means for performing the access request on one or more physical volumes associated with the secondary virtual volume includes means for converting the access request to a format suitable for the second media type.

22. (Original): The apparatus of claim 12, wherein the access request is received using a first communication protocol and wherein the means for performing the access request on one or more physical volumes associated with the secondary virtual volume includes means for converting the access request from the first communication protocol to a second communication protocol.

23. (Currently Amended): A computer program product in a computer readable medium for managing copies of virtual volume data, comprising:

first instructions for receiving an access request directed to an original virtual volume, wherein the original virtual volume is associated with one or more original physical volumes contained on a first type of data storage media;

second instructions for mapping the access request to a secondary virtual volume;
and

third instructions for performing the access request on one or more physical volumes associated with the secondary virtual volume contained on a second type of data storage media.

24. (Canceled)

25. (Original): The computer program product of claim 23, wherein the original virtual volume is associated with one or more original physical volumes, and wherein the one or more original physical volumes are the same as the one or more physical volumes.

26. (Canceled)

27. (Currently Amended): The computer program product of claim [[26]] 23, wherein the first type of data storage media and the second type of data storage media is one of magnetic tape media, magnetic disk media, optical media, floppy diskettes, CD-ROM media, DVD-ROM media, random access memory (RAM), and memory card media.

28. (Original): The computer program product of claim 23, wherein the second instructions for mapping the access request to a secondary virtual volume include instructions for redirecting the access request from a first secondary virtual volume to a second secondary virtual volume.

29. (Original): The computer program product of claim 28, wherein the access request is redirected in response to a fault in a physical volume of the first secondary virtual volume.

30. (Original): The computer program product of claim 28, wherein the access request is redirected in response to a command to redirect the access request to the second secondary virtual volume.

31. (Original): The computer program product of claim 28, wherein the first secondary virtual volume includes physical volumes on a first media type and the second secondary virtual volume includes physical volumes on a second media type.

32. (Original): The computer program product of claim 31, wherein the third instructions for performing the access request on one or more physical volumes associated with the secondary virtual volume include instructions for converting the access request to a format suitable for the second media type.

33. (Original): The computer program product of claim 23, wherein the access request is received using a first communication protocol and wherein the third instructions for performing the access request on one or more physical volumes associated with the secondary virtual volume include instructions for converting the access request from the first communication protocol to a second communication protocol.
